Materials (good resistance): NBR (Nitrile rubber), NR (natural rubber, Natural latex), PVA (Polyvinyl alcohol)

Wear gloves for protection against chemicals according to EN 374.

The glove material must be impermeable and resistant to the product/the substance/the preparation. Due to the lack of tests, no recommendation can be made on the glove material for the product/preparation/mixture of chemicals. Selection of glove material considering breakthrough times, permeation rates and degradation.

Glove material:

The selection of a suitable glove depends not only on the material but also on other quality features and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of glove materials cannot be calculated in advance and must therefore be checked before use.

Permeation time (maximum wear duration):

The exact breakthrough time must be obtained from the protective glove manufacturer and must be observed.

Respiratory protection:

Not necessary.

Other protection measures:

General protective and hygienic measures: The usual precautions when handling chemicals must be observed. Do not eat, drink, smoke or snort while working. Do not inhale dust/fume/mist. Keep away from food, drink and animal feed. Wash hands before breaks and at the end of work.
